Dear Hiring Manager,

I am writing to express my interest in a Java Backend / Microservices Developer position. I am currently a Computer Programming and Analysis student at George Brown College, with a strong focus on backend and full-stack development, particularly in building scalable systems using Java, Spring Boot, and REST APIs.

Through my academic and project experience, I have developed practical skills in designing and implementing backend systems. In my capstone project, I worked on a microservices-based marketplace platform that connects farmers, customers, restaurants, and NGOs. I contributed to building backend services using Spring Boot, implemented secure authentication and role-based authorization using JWT, and integrated Stripe for payment processing. This experience gave me hands-on exposure to service-oriented architecture, API design, and real-world system scalability.

In addition, I have experience working with databases such as PostgreSQL and MongoDB, as well as developing RESTful APIs and optimizing queries for performance. I have also worked with FastAPI and Python for backend services, and I am comfortable working in Agile team environments using Git and collaborative workflows.

I am particularly interested in backend development because I enjoy designing system architecture, structuring services, and building reliable and efficient applications. I am motivated by solving real-world problems and continuously improving my technical skills.

I would welcome the opportunity to contribute to your team and further develop my experience in building scalable backend systems. Thank you for your time and consideration.

Sincerely,
Ivan Barnash
